Тема	0026343: Print issue				
Описание	It's really strange, but mantis documentation is extremely non-informative. I tried to find solution om wiki (e.g. here: https://www.mantisbt.org/wiki/doku.php/mantisbt:customizing_columns_in_view_issues_page) can't find anything related to my issue. After this i tried ti check a documentation and found that i should change variable \$g_print_issues_page_columns , so i did it, but nothing happens at all. When i try to print issue it prints with all possible fields on it... So, i don't know how can i custumize print-version of issue page to print only those fields which need.

You did not really explain what the "print issue" actually is.

My understanding is that you want to change which columns are shown when printing (i.e. via `print_all_bug_page.php`). Changing `$g_print_issues_page_columns` is correct, but this only sets the global default value; that can be changed individually by each user and for each project, via *My Account / Manage Columns* (`account_manage_columns_page.php`). You can review which user(s) customized this via *Configuration Report* page (`adm_config_report.php`)

Does that answer your question ?

 intervision 2019-11-11 13:05 автор ~0063077	My understanding is that you want to change which columns are shown when printing Yes this only sets the global default value; that can be changed individually by each user and for each projec I have set this option per project for all users and check my own settings - there is no result
 intervision 2019-11-11 13:13 автор ~0063078	As you can see for one project i have only 5 columns, but when i try to print some issue, i have 3 pages with all data (including adding comment form!)
 dregad 2019-11-11 14:37 разработчик ~0063079	Sorry but I can't reproduce the issue.
